### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Peter J. Gutierrez on 01/26/2011.

For claim 27, line 2 change "computer readable medium" to – non-transitory computer readable medium--.

For claim 30, line 2 change "computer readable medium" to – non-transitory computer readable medium--.

For claim 38, line 9 change "false packet" to – false response packet--.

### **Reason For Allowance**

For claim 1, and similarly 18,23,36,27,30,31,38,43,49 the claims present a claim where a first packet that is an asynchronous packet and does not require that an unarbitrated response or ack packet be sent in response, is received and if there is not a second type of asynchronous packet to be sent , then a false acknowledgement / response packet is concatenated and transmitted with the first packet. The closest prior art Hauck et al (US 6,356,558) discloses where a EOS token is inserted after a last packet of a subaction to accelerate arbitration. Duckwall et al (US 5, 495,483) discloses where a

acknowledgement packet is inserted to accelerate arbitration. Based on applicant's interpretation of "bogus " or "false " acknowledgement / response as pointed out on page 11 and 13 of the Remarks dated 11/12/2010 and in the specification paragraph 0026, the Duckwall reference is silent regarding such a "bogus " or "false " acknowledgement / response. Therefore, the prior art does not by either anticipation or reasonable combination teach the following:

"A method for administering a serial bus, the bus facilitating communication between node devices connected to the bus and communicating over the bus in the form of packetized communication between said node devices, **wherein a first type of packet comprises asynchronous packets characterized by the absence of a requirement that an unarbitrated response or ack packet be sent in response to transmission of a packet of the first type**, wherein a second type of packet comprises asynchronous packets, the method comprising:

if there is a packet of the second type to be sent, then concatenating the packet of the second type to a plurality of packets of the first type and sending the plurality of packets of the first type followed by the concatenated packet of the second type; and

**if there is no packet of the second type to be sent, then concatenating a bogus ack packet to the plurality of packets of the first type and sending the plurality of packets of the first type followed by the concatenated bogus ack packet."**
